

On the Subject of The Blue Button

This is a button. It is blue.

In the maze corresponding to the symbol on the button, find a position given by the first and second character of the serial number (as base-36 digits) modulo 10 (column 0-9 from left to right, then row 0-9 from top to bottom). Calculate the distance between this position and the position displayed on the screen, modulo 60. Tap the button when the seconds on the bomb timer equal this value, or the total seconds equal a tenth of it (rounded down).
