# On the Subject of The Orange Button

This is a button. It is orange.

- Observe the time it takes the eight LEDs to make a full rotation, and divide it by the time between changes to the LEDs.

- This ratio is always a fraction whose numerator and denominator, when expressed in lowest terms, are between 1 and 9.

- If the LEDs are moving clockwise, hold the button when the last digit of the bomb's countdown timer is equal to the numerator, and release it when the last digit is equal to the denominator.

- If the LEDs are moving counter-clockwise, do the same but with the numerator and denominator swapped.
